

### Maintenance:

---

As part of our ongoing commitment to enhancing service quality, we will be performing a PHP upgrade on the web server that hosts Webbuilder websites.

### What will happen?

---

Our Linux infrastructure team will be upgrading the web server VHOST22, which hosts Webbuilder websites, from PHP 7.4 to PHP 8.2. This upgrade will enhance server security and ensure continued support for modern web standards.

### When will the work be carried out?

---

Wednesday 17<sup>th</sup> September at 10am.

### Who will be completing the work?

---

Iomart Linux Infrastructure team

### Will I experience downtime?

---

While we do not anticipate any downtime during this upgrade, as with all maintenance activities, there is a minimal level of risk involved. Our team will take all necessary precautions to ensure a smooth and uninterrupted service.
